OPEN-SOURCE COMPLIANCE

OpenSAI Licensing & Third-Party Notices

Understand the rules for using, modifying, and redistributing OpenSAI core software, bundled Web console assets, and external models or datasets.

When reviewing compliance obligations, distinguish three categories of material: **OpenSAI's own source code and documentation**, **open-source frontend runtime packages bundled inside the prebuilt Web console**, and **external Python packages, model weights, or datasets obtained separately for specific applications**. The notices you retain depend on which components you actually redistribute.

1. OpenSAI Project License

OpenSAI's source code and documentation are released under the permissive **MIT License** with the following copyright notice:

Copyright (c) 2026 Institute on Networking Systems of AI, INSAI

Under the MIT License, you are free to use, copy, modify, merge, publish, distribute, sublicense, and incorporate OpenSAI into both open-source and proprietary commercial products. When distributing copies or substantial portions of the software, preserve the copyright notice and license text (found in the root LICENSE file; canonical text published by the Open Source Initiative). The software is provided "AS IS", without warranty of any kind.

2. Common Usage & Distribution Scenarios

Scenario	What You Need to Do
Academic research & teaching	Install, modify, and run freely; cite the software version used in publications as described in Contributing & Citation
Internal team or lab deployment	Deploy across your own devices and connect proprietary internal applications with no obligation to disclose your application code
Redistributing modified OpenSAI	Retain the original MIT copyright and `LICENSE` file, and clearly identify your modified product or fork version
Commercial product integration	Embed OpenSAI in commercial hardware or software offerings while preserving OpenSAI's MIT notice (and frontend notices if shipping the console)
Publishing standalone OpenSAI apps	Choose any suitable license for your own application code, and include notices for any third-party libraries or assets bundled with it

Project names and institutional marks identify origin; state your relationship to OpenSAI accurately when describing compatibility or derivative distributions without implying official endorsement.

3. Scope of Third-Party Components & External Assets

Component Category	How It Is Provided & Governed
Prebuilt Web console bundle	Shipped in the release archive using the MIT, ISC, and SIL OFL 1.1 components listed in Section 4; full license texts are retained under `licenses/frontend/`
Python runtime dependencies	Installed from package indexes via `pip` according to `requirements*.txt` under each package's own license
Frontend build toolchain	Installed via your package manager only if modifying `frontend/`; versions are recorded in `frontend/package-lock.json`
Redis server & client	Uses an existing system Redis or a portable build prepared during setup, governed by that Redis distribution's accompanying license
Optional model code & weights	External models (such as How2comm or YOLO) are not bundled; obtain them from their authors under their respective terms
External datasets	Datasets (such as V2XSet or CIFAR-10) are not bundled; obtain them from original providers and follow their dataset terms

4. Notices for the Bundled Web Console & Fonts

The prebuilt Web console in the release archive includes the following third-party frontend runtime dependencies and self-hosted fonts (under permissive **MIT**, **ISC**, and **SIL Open Font License 1.1** terms, with complete original license files preserved in `licenses/frontend/` inside the code archive):

Frontend Package / Typeface	Bundled Version(s)	Declared License
`@babel/runtime`	`7.29.7`	MIT
`@react-three/drei` / `@react-three/fiber`	`9.122.0` / `8.18.0`	MIT
`@xyflow/react` / `@xyflow/system`	`13.0.2`	MIT
`its-fine`	`1.2.5`	MIT
`lucide-react`	`1.77.0`	ISC
`react` / `react-dom`	`18.3.1`	MIT
`react-reconciler`	`0.27.0`	MIT
`react-use-measure`	`2.1.7`	MIT
`scheduler`	`0.21.0`, `0.23.2`	MIT
`three` / `three-stdlib`	`0.169.0` / `2.36.1`	MIT

Frontend Package / Typeface	Bundled Version(s)	Declared License
`use-sync-external-store`	`1.6.0`	MIT
`zustand`	`3.7.2`, `5.1.0`	MIT
`Inter` / `Newsreader` / `Geist Mono` fonts	Variable WOFF2	SIL OFL 1.1

If you modify `frontend/` dependencies and rebuild the static console, update `licenses/frontend/` to match the packages included in your new bundle.

5. Redistribution Checklist & MIT License Text

Before distributing OpenSAI or derivative bundles, verify:

1. Include the root `LICENSE` file whenever distributing OpenSAI source code or substantial portions of it;
2. Include `licenses/frontend/` whenever distributing the prebuilt Web console;
3. Verify redistribution rights and include required notices if bundling external models, datasets, or additional third-party binaries (distributing lightweight application code separately from large weights and datasets is recommended).

Legal license texts remain in their original English wording regardless of documentation language. The project's MIT License is reproduced below for reference (中文开源许可与第三方说明):

Appendix: MIT License
